

Ghostkeys

Every blank surface is a key.

A MacBook is mostly *dead space.*

Palm rests. Speaker grilles. The strip above the keys.

None of it does anything, while we spend the day hunting for shortcuts.

Tap it. *It runs.*

LEFT PALM REST

Mute the call

RIGHT GRILLE, TWICE

Screenshot

TOP STRIP

Back to the last app

The sensor is already inside. *We learned to read it.*

800

READINGS A SECOND

From the motion sensor in every Apple silicon MacBook. No admin rights, no new hardware.

33

MEASUREMENTS PER TAP

Two models vote on which spot you touched, and refuse to guess when a tap looks unfamiliar.

0

BYTES LEAVE THE MAC

Calibration, detection and learning all run on the laptop.

Wrong or false taps

16.5% → 1.4%

False taps while picking up the
laptop

2 / min → 0

Taps recognised on a lap

0% → 84%

On our own recordings. Every number re-run by an independent reviewer who did not write the code.

Hands in the air. *No camera.*

The speakers play two tones too high to hear. The mic listens to how your hand bends them.

Calibrates in a minute. *Explains every miss.*

A live view of every tap and where it was felt.
A tester that shows what fired and why.
Per-app layouts for Excel, Figma, Zoom.

Why didn't that work?

Missed a tap That wasn't me

People who live on their laptop *and hate reaching for shortcuts.*

Analysts

Excel all day. Macros on a palm rest.

Designers

Tools and undo without leaving the canvas.

Developers

Build, run and switch without a chord.

Anyone on calls

Mute on a tap they can find blind.

Signal Mac users already pay for input tools like BetterTouchTool and Raycast. Every Apple silicon MacBook already has the sensor.

Free to try. *Pay once to keep going.*

FREE

\$0

Forever

Two hidden buttons on your palm rests.

PRO

\$29

Once · \$19 at launch

Every surface, every gesture, every action.

TEAMS

\$49

Per seat, per year

Pro for the whole desk, managed by IT. From 3 seats.

No hardware. No camera. *No cloud.*

The Touch Bar is gone.

Apple removed the one extra input strip MacBooks had.
The space is still there.

Macro pads cost money and desk space.

Ghostkeys uses the laptop you already carry, on a train or a couch.

Trackpad gestures are full.

Every swipe is taken. The rest of the chassis is not.

MONTH 1

Signed public beta from the waitlist.

MONTH 2

Sonar at everyday volume. Swipes in the air.

MONTH 3

Learning from use, proven not to learn the wrong tap.

MONTHS 4 TO 6

Windows release. Team layouts. First paying teams.

Ghostkeys

Try it on the laptop in front of you.
